

# Echidna

An Echidna is a small Australian mammal. To protect itself it can turn into a spiky ball.

It has a spiky back to scare away predators. It looks small and has brown spines.

It lives in mountains and grasslands.

Enchidna

It eats insects,  
termites and ants. It  
can use its long  
sticky tongue to  
eat with.

Did you know?

Enchidas have no  
teeth only a long  
tongue.
